

SOLUTION OVERVIEW

Agile Transport Planning

A modern solution for faster, automated planning to optimize transport routing and cost savings.

Trimble Transport Planner, a feature enabled with our Transport Assignment solution, is an agile logistics solution that delivers optimal transport results with unprecedented speed and simplicity at a fraction of the traditional cost. Delivering the shortest way to cost optimization.

Custom optimization

Configure planning your way by prioritizing what matters the most to you, set different objectives for your scheduling units, and adjust them based on daily needs.

Complete control and flexibility

Seamlessly maintain full control over your operations with the ability to manually split or rearrange transports, and easily adjust rules and constraints to fit any business scenario.

Seamless integrations

Unlock access to streamlined planning via our Transport Assignment solution, and take advantage of seamless integration with your existing ERP/TMS and Trimble-native solutions for an efficient workflow.

KPI dashboard

Enhance decision-making by gaining immediate actionable insight into cost, distance and efficiency metrics, and utilize scenario comparison tools to make the best data-driven choices.

Transport Planner advantages:

- Fast, easy implementation and use to deliver value within days or weeks, not months
- Dramatic cost reduction; gain optimal results at a fraction of the cost vs heavyweight TMS solutions
- Operational excellence with human control via automated planning with manual override capabilities
- Quick ROI & lower total cost of ownership due to rapid deployment with minimal setup and fees required
- Seamless workflow integration automates end-to-end processes to cut manual handoffs and data silos

Experience the optimal balance between cost, simplicity and effectiveness with our agile Transport Planner solution. Learn more: transportation.trimble.com/products/freight-sourcing/transport-assignment
