

Top 5 reasons delivery logistics companies use Trimble Appian

**1**

Appian connects seamlessly with your business intelligence

Quickly use our pre-built reports to analyze your resources and your route profitability. There's no longer a need for you to go to IT to build out custom reports. Check that off your list.

2

Generate optimized routes that provide a customer-controlled delivery

Solutions are built on a thirty-year trusted routing algorithm that considers all fleet constraints to optimize resources and territories. Understand the complete breakdown of your routes and how time windows are affecting your bottom line. **Saves you time and money.**

3

Edit your daily routes in real time

Make adjustments to routes whenever you need and optimizing your route, based on those changes. **Have control where you need it most.**

4

We help customers control transportation spend & provide superior customer service

Measure your KPIs and build reports on those metrics to plan your future. Break down your metrics into easily actionable items such as drive times and mileage. Little wins add up to big savings for you and the customer.

5

Easily dispatch & analyze routes with mobile connectivity for visibility & real-time insights

Instantly track where your vehicles are at any given moment with real-time conditions. This makes for a more accurate estimated time of arrival. **Happy customers, happy you.**
