

## SOLUTION OVERVIEW

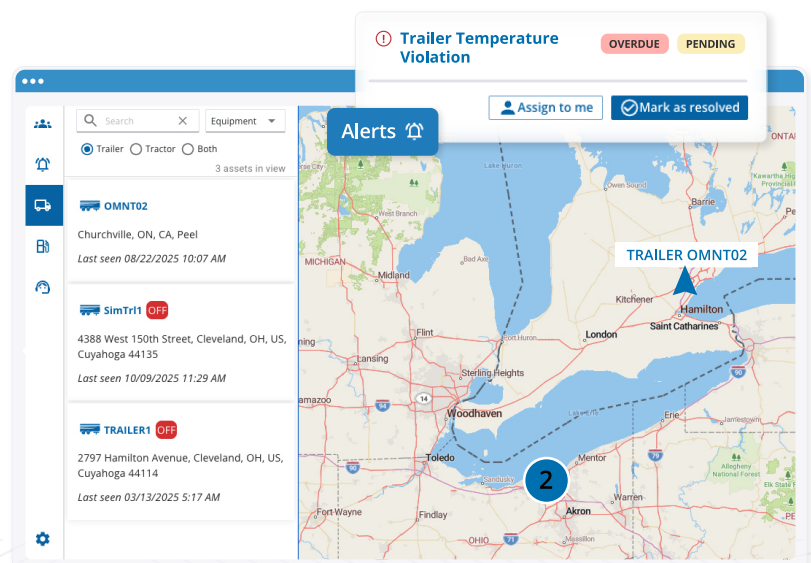

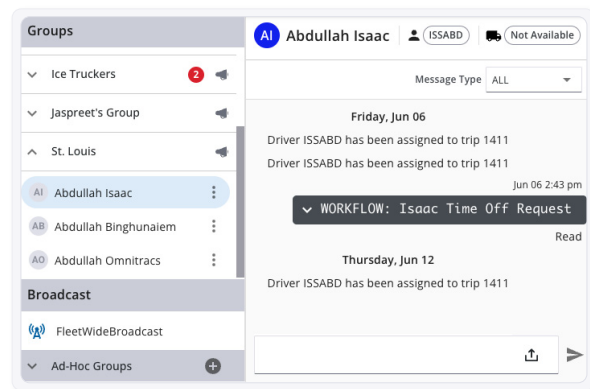

# Connect with your drivers efficiently

Advanced driver communication platform designed for Trimble transportation management systems.

Trimble Fleet Hub serves as a centralized hub for dispatcher-driver interaction. Unlike outdated systems like TotalMail, Fleet Hub offers fast messaging, driver visibility, and engineered for superior performance for the Trimble TMS ecosystem.

## Key Features

- Full access to driver information including locations allows dispatchers full visibility at all times
- Browser-based interface allows dispatchers to communicate with drivers from any location
- Integrated with majority of telematics providers
- Combine with Trimble Smart Workflow for a seamless driver operation

### Engineered for performance

- Scalable, secure, and robust APIs allow for safe communications for any size fleet
- Advanced task management with drag-and-drop scheduling, bulk actions, ETA updates, and issue reporting
- Near real-time messaging in 15 seconds or less

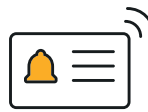

### Future-proof your driver communications

- Integrates with present and future Trimble TMS products
- Trimble Maps' industry-leading transportation data provides most accurate, truck-specific routing and location intelligence
- AI capable out of the box with an assistant to support your users

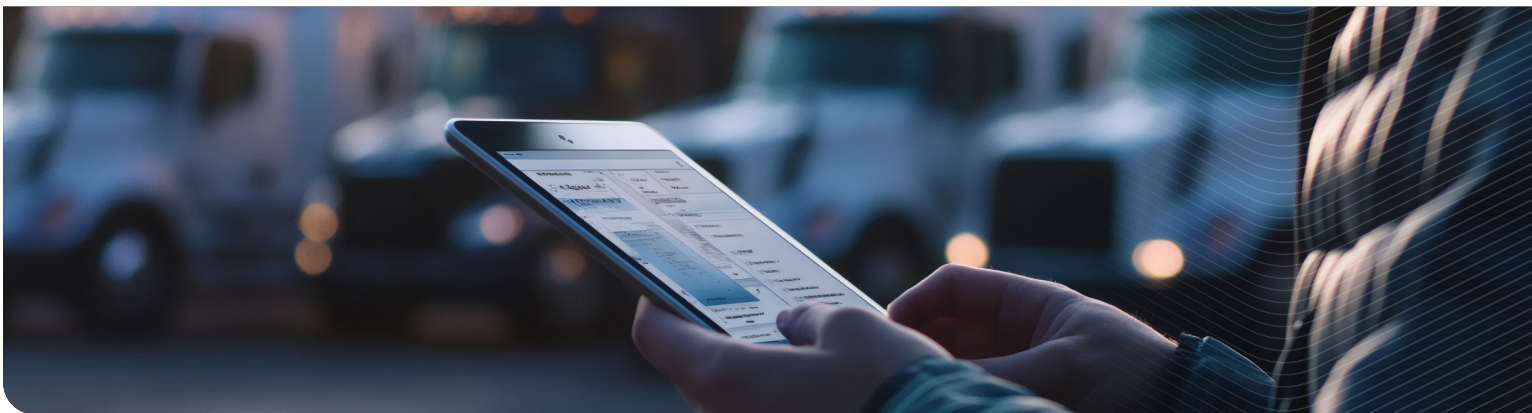

### Keep drivers engaged

- Messages arriving within seconds, allows for free-flowing communications
- Group drivers by location or manually in order to keep drivers informed
- Templated "Quick Replies" minimizes driver frustration and increases productivity

### Secure Real-Time Alerts

- Access Trailer tracking for improved asset utilization
- Securely Monitor Hours of Service compliance with accurate HOS feed into your TMS
- Receive Geo-fence alerts for added security

**Increase driver retention and drive meaningful ROI from superior communication technology by Trimble.**
