

Agile TMS experience for Shippers & LSPs

Trimble's modular, cloud-based TMS offers a unified, customizable AI-driven system for end-to-end transport management.

Discover a scalable, agile transport management experience in a world increasingly shaped by AI. Trimble TMS for Shippers harnesses AI-supported technology and data enrichment to empower logistics professionals with a modular solution for managing daily operations and navigating a rapidly evolving transportation market.

AI and ML-driven solution suite

Benefit from streamlined operations and improved efficiency driven by automation and optimization of daily end-to-end transportation functions to better navigate an ever-changing competitive market.

Open and adaptable

From integrating specific solutions into your system to adopting our complete portfolio, your needs are our priority. We build integrations in-house, adapted to your format and use-cases.

Robust, cloud-native system

Our secure, cloud-based, modular TMS delivers a customizable, unified suite of reliable solutions to optimize your supply chain, gain real-time visibility, boost overall efficiency, and more.

Carrier network management

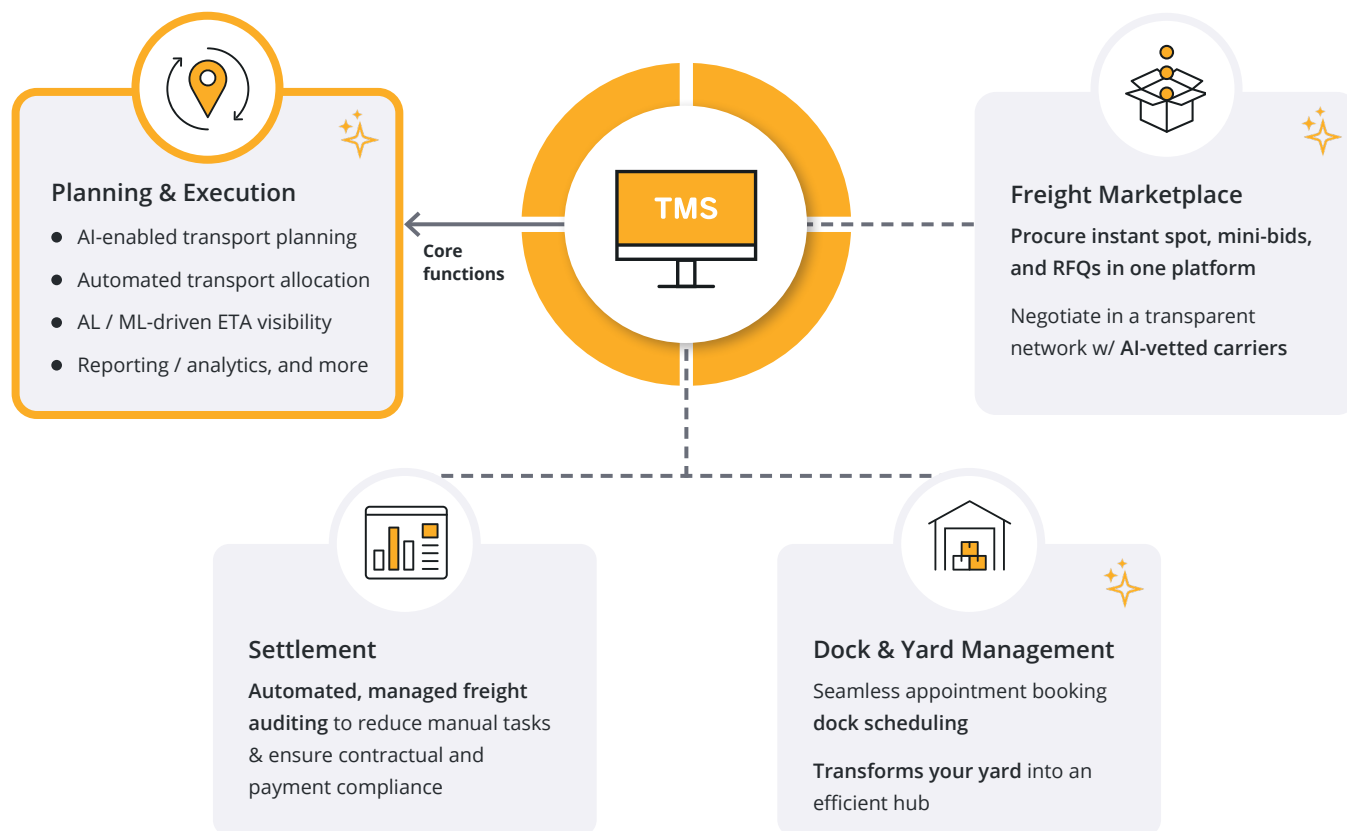

Foster better collaboration with your carriers, new partnerships and reliable service delivery using our comprehensive tools for carrier selection, performance monitoring and relationship management.

Advantages of Trimble TMS for Shippers:

- **Build your ideal system** for daily transport management with our agile, modular TMS
- **Automate, optimize and manage daily transport operations** using smart AI-enabled planning and more
- **Advanced analytics and reporting** features provide valuable insights into operations and trends
- **Easy deployment and user-friendly UIs** offer efficient onboarding for unlimited users
- **Predictive monthly subscription** with flexible usage-based scaling provides better cost control

Tailor your TMS with a powerful suite of bundled & single modular use case options

Enhancing efficiency and connectivity across operations

Benefit	What it delivers
AI empowerment	Take advantage of faster access to next-gen AI capabilities and more rapid innovation cycles
Automation	Tap into valuable data streams and automate daily workflows with AI and machine learning
Agility	Build your ideal TMS experience to match the dynamics of your business using a cutting-edge modular software solution
Collaboration	A single connected flow, designed to connect all partners and enable seamless real-time information sharing
Real time insights	Information at the speed of business to make timely, informed decisions before, during, and after the transport process
Growth & scalability	A modern set of solutions for core shipper functions that supports technology elasticity and connected network scaling
Streamline cost & process	Control costs and eliminate waste to lower your TCO over time while improving efficiency, compliance, and visibility

Take advantage of an intelligent TMS, combining the industry's richest data with AI for learning, adaptation and automation. | <https://transportation.trimble.com/en/solutions/transportation-management/shipper-tms>
