

SOLUTION OVERVIEW

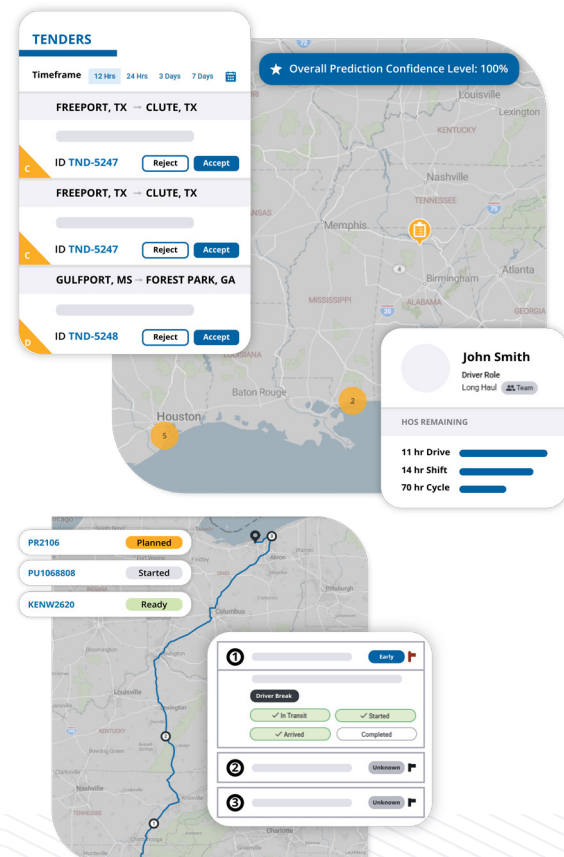

AI-powered, cloud-native TMS solution

Built to provide a future-focused foundation for your entire transportation lifecycle

What if you could automate and streamline routine tasks, so your team can focus on the mission-critical activities that drive your business? From order intake to settlement, **Trimble TMS** uses purpose-built, embedded AI to simplify your operations, make your team more efficient, protect your margins, and maximize your ROI.

- **Your “crystal ball”** – See predictive capacity insights that enable you to view your load network up to seven days ahead to book with confidence.
- **Smarter dispatch decisions** – Dispatch Decision Assist recommends driver-to-load matches by location, HOS and equipment, eliminating guesswork.
- **Operation automation** – Automatically intake orders, accept tenders and assign drivers, while AI highlights the most profitable manual choices.
- **Unified 360-degree view** – Make better decisions from one place with key data and automated compliance/expiration tracking on every screen.
- **Live network visibility** – Real-time ETAs and lane/load balance mapping show where freight stands so you can rebalance fast before issues grow.

Major advantages

Trimble TMS is easy to learn and use. It manages the full lifecycle from tender to cash, using AI to drive efficiency throughout. It offers several major advantages over traditional TMS implementations.

Strong foundation

Leverage an integrated ecosystem of tools purpose-built to eliminate mundane, error prone labor. For full truckload operations, Trimble TMS gives you predictive insights, end-to-end lifecycle visibility, and the data to maximize profitable outcomes.

Future-proofed tools

Future-proof your business with a solution that continuously delivers Trimble's newest technology, securing your competitive advantage and guaranteeing your platform always stays ahead of the curve.

Fast time to value

Get up and running quickly with bulk data migration and automated data sync from your existing systems. A dedicated Control Center then empowers your team with self-service configuration as your business evolves.

Safety and security

Secure your operation and sensitive data through a cloud-first solution which includes global 24/7/365 threat monitoring, continuous security patching and a resilient architecture that delivers unmatched, multi-layered protection.

Increased intelligence

Increase operational efficiency across your entire business: Dispatch Decision Assist helps you choose the right loads for every driver. Real-time ETA updates factor in traffic, weather, and HoS. Contextual mapping powered by Trimble Maps—built for trucking—gives you an accurate view of your fleet. And driver communication, powered by Trimble Fleet Hub, works in concert to break down data silos and save your team crucial time and money across the complete transportation lifecycle.
