Trimble

Trimble Appian

SOLUTION OVERVIEW

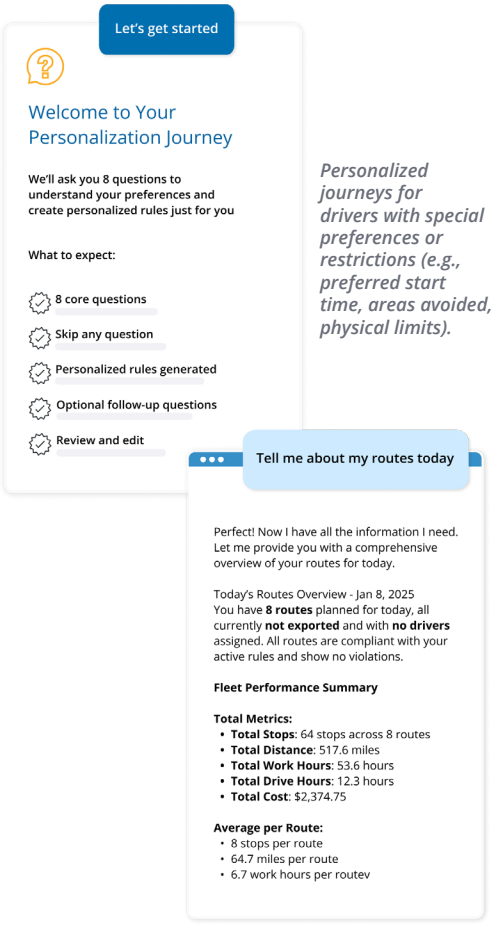

Fleet management anytime, anywhere

Manage 24/7 disruptions with adaptive AI that learns your rules for expert-level fleet control in the palm of your hand.

It's 6:00 PM. You've just left the office for home. Everything's fine until traffic backs up, a last-minute order comes in and a driver calls in sick. Normally, you'd head back to the office or use a laptop at dinner, but now with Trimble Appian Fleet Assistant, that's not necessary.

Why Appian Fleet Assistant?

- **Intelligent automation**: Automate route building, order loading, and driver assignments while handling exceptions with AI-powered suggestions.
- **Knowledge preservation**: Capture domain knowledge from veteran dispatchers so their expertise stays in your business, even if they move on.
- **Informed decision making**: Keep teams in control with human-in-the-loop automation that previews the impact of each change before it's implemented.
- **Operational excellence**: Improve customer satisfaction and slash fuel costs by reducing empty miles through real-time route optimization.
- **Mobile-first design**: No app store downloads required. Use voice-activated commands for hands-free operation and decision-making from any device anywhere, anytime.

Personalized journeys for drivers with special preferences or restrictions (e.g., preferred start time, areas avoided, physical limits).
