Trimble

Trimble TruckMate

SOLUTION OVERVIEW

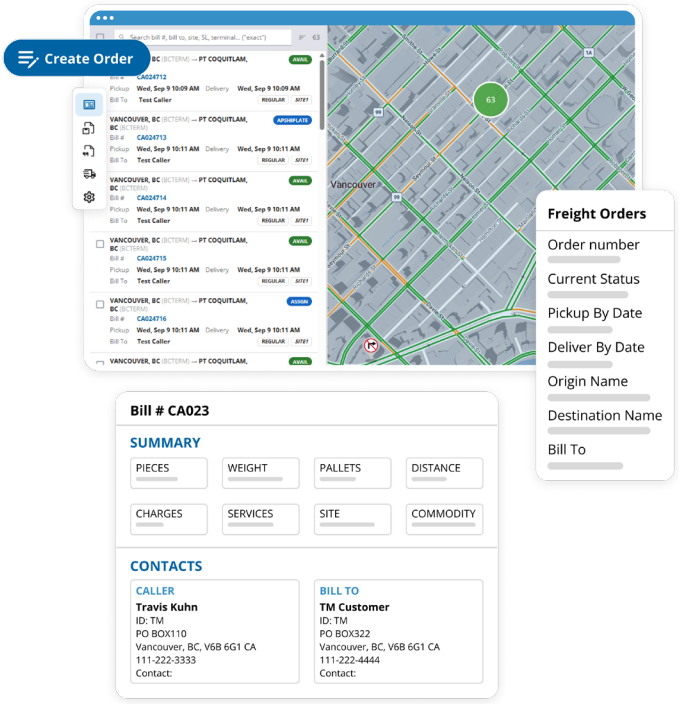

Turn day-to-day complexity into consistent execution

An AI-enabled TMS built for LTL, intermodal and multi-mode operations

Trimble TruckMate is for carriers running complex freight like LTL, intermodal, brokerage and multi-mode operations on one platform. Now that foundationis paired with modern workflows and AI that reduce routinedata entry. It's available now for customers on a recent release. Register to join the rollout and we'll confirm your path. Once you're in, you set the pace.

New capabilities include:

- Orders, quotes, dispatch planning, customer service and the web address book run on any device, with live Trimble Maps context built in
- Trimble Arc turns freight documents into orders and rate sheets, so teams focus on exceptions instead of re-keying
- Plan multi-stop moves and manage terminal, linehaul and P&D workflows in one place, without stitching together add-ons
- Bring execution to the terminal floor with mobile scanning that captures receiving, loading, OS&D and real-time updates back to the office

Your system of record, in a modern browser

Dispatch and network visibility

Give teams a clearer picture of the network so they can respond earlier, before small issues become service failures.

- Track active shipments and orders anywhere on mobile, powered by Trimble Maps with live updates on traffic, weather, truck restrictions and commercial site details
- Order density clustering shows pickups and deliveries at a glance across your network
- Dispatch Planning with customizable layouts, drag-and-drop workflows, and a full activity log
- Carrier Tracking and External Trace give customers and partners a self-serve shipment status view instead of calling your team
- Web-based customer service order entry and workflow management for front-line teams

Trimble Arc AI

- Arc validates documents against your TruckMate rules and keeps people in control, so work moves faster with fewer errors
- Two skills available today:
  - Order Intake: turns incoming freight documents into orders, with a fast review step so operators focus on exceptions before anything saves
  - Contract Intake: extracts rate and tariff data from contract PDFs and publishes it into rating, reducing manual setup and rework
- Built for trust: governed, auditable and secure by design

LTL operations

- Dispatch board built for multi-stop complexity, with drag-and-drop stops on a live map and automatic deadhead tracking
- Trip Operation Planning combines pre-plan, doubles and merge/switch resources into one tool for complex multi-leg moves
- Load Offers push available freight out to carriers and owner-operators to accept or decline, so brokerage and overflow capacity move without phone tag
- Captures line-level detail (parts and labor) to improve maintenance cost visibility and reporting
- Route data flows directly into billing and driver pay, reducing re-entry

How to gain access

- Open to TruckMate customers, whether running on premise or Trimble-hosted SaaS
- Your Trimble account manager can confirm what applies to your agreement
- Ask any TruckMate team member for an account on our demo environment

Scan to register for TruckMate Next Generation. Access is confirmed on a rolling basis.
