

## SOLUTION OVERVIEW

## State-of-the-art freight tracking & monitoring

Increase transparency and proactive control over your freight transport with our AI-enabled visibility solution.

Trimble Freight Visibility offers accurate end-to-end, real-time tracking and monitoring of freight for all transport modes. Powerful AI capabilities and our vast logistics network create precise ETAs that enable workflow automation and freight management to optimize supply chain performance.

### Greater Customer Satisfaction

Proactively address potential delivery issues before they escalate to help **exceed customer expectations**. When unforeseen issues arise, your team can proactively reach out to customers with a resolution vs reacting to angry calls.

### AI-Powered ETAs

Our powerful data engine is enriched with real-time traffic data, weather predictions, regulatory information and more; empowering you with **precise shipment ETA data** to minimize guesswork and improve overall planning.

### Optimized Supply Chain Monitoring

Accurate, real-time predictions lead to **fewer check calls** and better proactive exception management by efficiently identifying potential ETA disruptions for immediate intervention to minimize impact.

### Seamless Integrations

Integrate with your current TMS or other Trimble-native and 3rd party freight managing solutions to **streamline and improve daily operations** with machine-learning based ETAs, geofences, documents, and more.

### Trimble Freight Visibility Benefits:

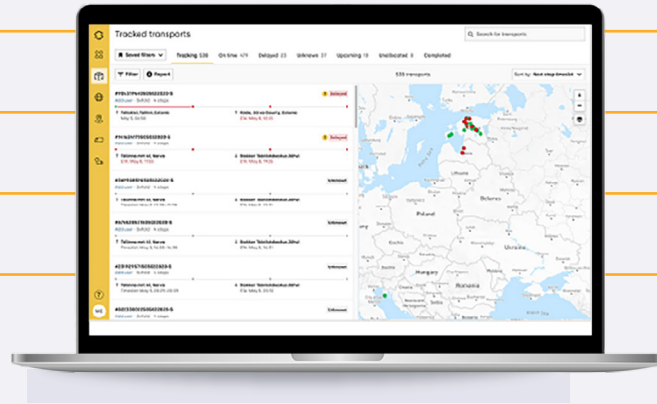

- Automate and customize your visibility experience to optimize the monitoring of all your shipments
- Gain detailed information on any specific freight transport in one simple click
- Increase on-time delivery performance and mitigate detention and demurrage fees
- Significantly reduce check calls by up to 80%\*
- Expand your business with access to our extensive network of global carriers and shippers

\* Performance metrics are based on EU market Transporeon user data. Actual results in the North American market may vary.

# Move, manage and monitor all of your in-transit shipments in one single interface

- GPS DATA**  
Processed by our AI engine
- EASILY CONNECT**  
To your FMS
- OVERVIEW**  
Of all your transports
- VALUABLE INSIGHTS**  
With the integrated reporting solution

- DETAIL VIEW**  
On each shipment
- MANAGE EXCEPTIONS**  
With alerts for delays
- DIRECT INTEGRATION**  
With Trimble solutions & TMS
- TOOLS SPECIFICALLY**  
Design for dispatchers (Fleet monitor and Map view)

## Enhanced Logistics Network Transparency

Freight Visibility enhances transparency by enabling real-time status and ETA information sharing across your stakeholder network.

✓	Customer Portals	Company filters that can be publicly shared with the end customer enables shippers and carriers to proactively inform end-customers on multiple transports in real-time.
✓	Customized Dashboards	Organize and proactively monitor all your transports, and share specific information with stakeholders.
✓	Automated Alerts and Warnings	Notification Rules allow you to define custom alerts for unexpected events like transport delays or deviations that will be automatically communicated. Automated transport warnings in the UI alert the user anytime something is wrong with the input data.

## Better Data Control and Management

Combining our innovative Trimble Trust Center with the **Visibility Control Center** tool to enable greater control of your visibility network, data sharing permissions, and carrier / subcarrier performance monitoring.

✓	Carrier Network Feature	Shippers can view data sharing consent and onboarding statuses of all the customers and partners within the carrier network. Easily invite carriers and subcarriers to share their visibility with you.
✓	Road Visibility Performance Feature	A detailed list of carriers in the carrier network and how well they are doing in terms of delivery performance.
✓	Complete Data Sharing Control	Carrier visibility data is only shared if the data sharing criteria is met and consented by the carrier. Carriers have control to stop sharing data at any time.
✓	Easy onboarding	Easy extension of real-time visibility to subcontractors. With Bulk Invite you can import your subcarrier list and send out invitations to join your network in one click.
✓	Outstanding data process and storage	Intelligently cleanses and refines carrier data (geofences, timestamps, etc.) for accurate tracking and insights. All data is securely encrypted for optimal peace of mind and control over data sharing.
